

CURRICULUM VITAE

Susan Lorey

Scil Proteins GmbH
Heinrich Damerow Str. 1
06120 Halle (Saale)
Tel: 0049 (0) 345 27 996 337
Susan.lorey@scilproteins.com

EDUCATION

Degree of Doctor of Philosophy (Ph. D)

September 1999

Institute of Biochemistry, Martin-Luther University Halle-Wittenberg

- Title: "Fluorogenic substrates and inhibitors for the detection of DPIV-activity on immune cells"
- Areas of study: Peptide synthesis and purification
 Enzyme kinetics
 Cell based assays

Degree of Bachelor of Science

September 1995

Institute of Biochemistry, Martin-Luther University Halle-Wittenberg

- Major: Biochemistry

RESEARCH EXPERIENCE

Researcher

October 2000 - present

Scil Proteins GmbH

- Construction and optimization of expression plasmids for maximizing protein expression
- Expression testing
- Ribosome display selection for screening of libraries for binding molecules
- Cultivation of primary and stable cell lines
- Cell characterization by FACS analysis
- Establishment of cell based assays for activity testing of proteins regarding induction of proliferation, migration, differentiation, phosphorylation, enzymatic activity, apoptosis

Assistant Researcher

October 1999 – September 2000

Institute of Biochemistry, Martin-Luther University Halle-Wittenberg

- Enzyme kinetic analysis of Tat(1-9) derivatives as inhibitors of DPIV

Ph.D student

October 1995 – September 1999

Institute of Biochemistry, Martin-Luther University Halle-Wittenberg

- Synthesis and optimisation of fluorogenic peptide substrates and inhibitors of DPIV using conventional peptide synthesis methods
- Purification and analytics using chromatographic methods (HPLC, TLC) and spectroscopic methods (MS, NMR)
- Enzyme kinetic analysis of substrate cleavage by DPIV and inhibition mode of DPIV using spectrometric analyses
- Cell based analysis of substrate cleavage by DPIV
- FACS based analysis of cellular anchorage of the cleavage product

SUMMARY OF SKILLS

- Peptide synthesis and purification
- Enzyme kinetic analyses
- Construction of expression plasmids
- Establishment of cell based assays
- Ribosome display selection
